Abstract (en)
A refrigerant return mechanism (5) is provided for returning liquid refrigerant in a receiver (17) to a circulation path. Whereby, the liquid refrigerant in the receiver (17) is forcibly returned to the circulation path in an operation state where the circulation path is formed in which the refrigerant sent out from compression mechanism (11D , 11E) flows from a second user side unit (20) to first user side units (30, 40) and is then returned to the compression mechanisms (11D , 11E).
