Abstract (en)
[origin: WO2007024175A1] The present invention relates to a device (1) in a stand (2) for binders, panels or other information agents intended for support and which is arranged angleable as well as lockable in a desired adjusted angle position. According to the invention, a holder (5) for said binders, etc., is mounted turnable around a substantially horizontal bearing shaft coupled to a holder base (6) . A manually actuatable angular-adjustment mechanism (4) is coupled between the holder (5) and the holder base (6) and this mechanism comprises a turnably mounted resilient actuator arm, which in the lock position is receivable in reception openings distributed along a slot-shaped recess.
