Abstract (en)
[origin: WO2007022757A1] A cabinet (1) with a pull-out part, preferably a drawer (2), which can be pulled out of the cabinet body is described. The particular feature of the cabinet is that the pull-out part (2) is provided with at least one pivotable storage part (3) which, with the pull-out part (2) pushed in, is situated completely within the inner space of the cabinet (1) which accommodates the pull-out part (2) and, with the pull-out part (2) pulled out, projects beyond a boundary of the cabinet (1), wherein the storage part (3) is subjected to the action of an energy-accumulating device in the pivoted-out direction. The cabinet (1) can also be designed in such a way that the pull-out part (2) is provided with at least one displaceable storage part (3) which, with the pull-out part (2) pushed in, is situated completely within the inner space of the cabinet (1) which accommodates the pull-out part (2) and, with the pull-out part pulled out, projects beyond a boundary of the cabinet (1), wherein the storage part (3) is subjected to the action of an energy-accumulating device in the pushed-out direction or is positively guided along a guide means..
