Abstract (en)

[origin: WO2007010269A2] An intolerance testing device and an intolerance testing system for determining a person's intolerance of specific substances, primarily specific foodstuffs. The device includes a memory for storing data which represents a signature frequency that is characteristic of a number of substances. The device includes a stimulation electrode for applying an alternating stimulation voltage signal, derived from the memory, at a selected frequency, to a user's skin. An amplifying and filtering circuit is coupled to a sensing electrode to detect a change in sensed body voltage.
