Abstract (en)
[origin: DE102005038591A1] The sensors have sensor units (12, 14, 16) that are arranged at a bumper (10) and are symmetrical to a central longitudinal axis of a motor vehicle. Other sensor units (22, 24) are arranged within a front vehicle area and at a cross unit (20) or cooler support or Z-column. An evaluation and control unit (30) combines and evaluates the sensor data of the sensor units for the activation of a pedestrian protecting system and/or a passenger protecting system.
