Abstract (en)

[origin: WO2007022825A1] The invention relates to a tubular bag (10) with a spout (13), which is sealed in the area of a top sealing seam, and with a stand-up bottom. The top sealing seam (12) is not sealed (partial sealing) at at least one location (14, 15) between the spout (13) and the outer edge so that when the bag (10) is squeezed, air can escape (arrow 16) through this non-sealed location (14, 15) and out of the bag (10).
