Abstract (en)  
[origin: WO2007020088A1] The invention relates to detachable, flat components (10, 12) that can be fastened to each other, in particular floor covering components. Each of said components has an edge region and said regions fit together by the displacement of the components in relation to one another, in such a way that the components, which lie on a common plane, are protected against becoming detached on said plane. The edge regions are configured as projections (14, 16), which lie one above the other in relation to their common plane when fastened to each other, in such a way that the components can be fastened to each other by means of an essentially linear relative displacement that is perpendicular to the common plane.
