Abstract (en)
[origin: WO2007020178A1] The invention relates to a gas cooking hob comprising a number of gas burners (10), each of which is connected to a main gas pipe (36) via a gas pipe section (14), and a main switch (24). The main gas pipe (36) or the gas pipe section (14) is open to supply gas to the gas burners (10) when the main switch (24) is actuated while a gas supply to the gas burners (10) is interrupted when the main switch (24) is actuated once again. In order to be able to jointly interrupt gas supply to all gas burners even without the user acting directly upon the main switch, a timing member (26) is assigned to the main switch (24) in order to adjust an interval after which the main switch closes automatically.
