Abstract (en)
[origin: WO2007020186A1] The invention relates to a cooking appliance which is mounted in an elevated manner and which comprises at least one muffle which defines a cooking area, whereby said muffle comprises an opening in the base thereof and which is surrounded by a muffle frame, a base door which is displaced by means of a drive device and which is used to close the muffle opening, at least one switch panel which is used to displace the base door in a directional manner. Said cooking appliance also comprises a memory unit which is used to memorise at least one target position of the base door, wherein the base door can be displaced in an automatic manner to the stored target position after the switch panel is actuated, until at least one target position is reached.
