Abstract (en)

[origin: WO2007020164A1] The invention relates to a method for heating a meal in a closed cooking appliance which is mounted in an elevated manner. Said elevated cooking appliance comprises at least one muffle which comprises a muffle opening and which defines a cooking area, a base door which closes the muffle opening and a ceramic hob which is arranged in the base door. Said method comprises the following steps: (a) at least one meal is placed on the ceramic hob, without cooking utensils, when the cooking appliance, which is mounted in an elevated manner, is in the open state, (b) the elevated cooking appliance is closed and (c) the at least one meal is heated at least by contact heat from the heated ceramic hob when the elevated cooking appliance is in the closed state.
