Abstract (en)

[origin: WO2007023131A2] The invention relates to ceramics and to a piezoelectric component having a magnetic layer, which can be used, for example, as a resistor component, as a switch element or control or memory elements or as a sensor. The aim of the invention is to provide a piezoelectric component having a magnetic layer which can modify the electric and magnetic properties of the thin layer(s), which are arranged thereon, by means of mechanical extension. Said aim is achieved by virtue of the fact that said piezoelectric component having a magnetic layer, which comprises the piezoelectric compound $(1-x)\text{Pb}(\text{Mg}_{<\text{SUB}>1/3}</\text{SUB}>\text{Nb}_{<\text{SUB}>2/3}</\text{SUB}>\text{O}_{<\text{SUB}>3}</\text{SUB}>$ - $(\text{X})\text{PbTiO}_{<\text{SUB}>3}</\text{SUB}>$ wherein $x = 0,2 - 0,5$ or the piezoelectric compound $(1-y)\text{Pb}(\text{Zn}_{<\text{SUB}>1/3}</\text{SUB}>\text{Nb}_{<\text{SUB}>2/3}</\text{SUB}>\text{O}_{<\text{SUB}>3}</\text{SUB}>$ - $(y)\text{PbTiO}_{<\text{SUB}>3}</\text{SUB}>$ wherein $y = 0 - 0,2$ as a substrate, with at least one thin magnetic layer arranged thereon, is epitaxially grown.
