Abstract (en)

[origin: WO2007023093A1] The invention relates to a contact assembly for an earthing switch (4, 5) or circuit breaker, said assembly comprising a first and second contact part (7, 9). The two contact parts (7, 9) can be displaced in relation to one another. At least one of the contact parts (7, 9) is allocated to a limiting element (12), which restricts a deflection of the contact part (7, 9) transversally to the displacement path. When closed, the limiting element (12) connects the second contact part (9) to a support element (6).
