Abstract (en)

[origin: FR2889395A1] The method involves selecting an activation command by a user and executing a personalization program associated with the command by a personalization table for personalizing media flows exchanged between a mobile terminal and a connection termination. The exchanged media flows personalized at a relay address such as Internet protocol address defined for the personalization are transmitted, and the flows oriented towards the termination are retransmitted from the address, where the flows are personalized or not according to whether the personalization has been carried out or not. Independent claims are also included for the following: (1) a device for personalizing media flow exchange between a terminal used by a user and a connection termination during same session of interpersonal communication (2) a system for exchanging media flows between a terminal and a connection termination (3) a computer program for exchanging media flows between a terminal and a connection termination.
