Abstract (en)
[origin: WO2006133364A2] In accordance with the present invention, a media content management application that allows a user to create and customize a version of media content based on semantic criteria is provided. Based on semantic criteria, the media content management application may use editing/assembly software packages to construct a version of the media content for an intended audience. In addition, the media content management application uses semantic criteria to provide the user with options for optimizing the cost of the version of media content, options for delivering the version of media content, and/or options for delivery mediums to transmit the version of media content.
