Abstract (en)

The shoe has an upper formed of two pieces that are assembled by gluing. A set of carriers (121) is constituted of a strap made of synthetic textile material and disposed face-to-face along the length of a lacing zone (119). The carriers are assembled between two glue layers (130, 131) of the upper. A band (132) permits perfect folding and assembling of carriers at the upper.

Abstract (fr)

L'invention propose une chaussure comportant une semelle (12) et une tige (14), caractérisée en ce que la tige (14) comporte au moins deux pièces (14,26) qui sont assemblées l'une à l'autre par une zone de collage, l'une de ces pièces étant un rabat de protection (26).
