Abstract (en)
[origin: EP1917878A1] The bag has a flexible cover fixed to a base (1) and provided with a front wall (2), a back wall (3) and two side walls (4) defining an opening at a face of the base, where the base is rigid. Each side wall has a front side, a back side, an opening side and a base side. The base side is arched from the front side to the back side, while turning its convexity towards outside of the bag. Rollers (10) are fixed on the base while exceeding outside and inside of the bag, where a rotational axis of the rollers is carried in bearings arranged in a gusset (13) riveted to the base. An independent claim is also included for a method for folding a bag.
