Abstract (en)

[origin: EP1917883A2] The applicator (3) has a rod (4) with a longitudinal axis (X) and including an elastically deformable flexible portion (20) that bends during application and/or whirling. An application element (5) is fixed to the flexible portion of the rod and has a twisted core and bristles (11) transversally extending to the axis of the rod. The portion is adjacent to an end (4a) of the rod and includes a housing in which the application element is inserted. The rod has a rigid proximal part whose length is larger than that of a rigid distal part. The portion is overmolded on a rigid part of the rod. An independent claim is also included for a method for cosmetic treatment using an applicator.
