Abstract (en)

[origin: EP1918444A2] The water container (1) has ballast weights (10,11) mounted by screw joint, which are pressed at container walls (2,6) in contact areas. A spigot is formed at the container wall for the screw joint, which protrudes into a corresponding opening in the ballast weight. A rotary hollow chamber is stayed between the spigot and the opening. A rotary, elastic element is inserted in the hollow chamber between the spigot and the opening, which fills the hollow chamber sectionally.
