Abstract (en)

[origin: EP1918445A1] The washing solution tub (1) for a drum-type washing machine has a ballast weight (11) which includes an elongated opening at least on the outer side ends and in the region of the apex (27). In the operating position of the washing solution tub, the openings (16a) on the outer side ends of the ballast weight are orientated horizontally, and the opening (16b) in the region of the apex is orientated vertically. A cavity between each spigot formed on the tub wall (6) and the respective opening enables positioning of the ballast weight on the tub wall.
