Abstract (en)

[origin: EP1918477A2] The invention relates to the industry of building materials being used in particular for the erection of low-storey buildings and may be used for construction of partition walls of civil and industrial structures. A three-layer basic block with a load carrying interior layer (1) made from concrete and a facing layer (2) is used, between which an interior heat-insulating layer (3) is placed. Each layer is having a thickness selected from range of thicknesses being previously defined. On the grounds of basic block an assembly of modular type blocks is created, including the line wall blocks (A1,A2,A3) in several standard sizes, the corner blocks (B1,B2,B3) in several standard sizes, the aisle blocks (C1,C2,C3) in several standard sizes, the joint blocks (D1,D2,D3,D4) in several standard sizes, set of the oriel blocks (E1,E2,E3,E4,E5) of several types.
