Abstract (en)

[origin: EP1918478A2] The device (1) has a lying and continuously driven conveying device (4). A shifting mechanism (6) is provided with a support (6a) with a gripping device (7) for detachable holding of the building block, by which a prefabricated unit (5) is producible by shifting the building block on the conveying device. The conveyer system is movable with a variable speed. The conveying device corresponds to the width of the prefabricated part. The conveying device has a conveying surface, which is horizontally arranged. An independent claim is also included for a method for the production of bricked prefabricated units from building block.
