Abstract (en)

[origin: EP1918492A2] The fitting has a retainer device for a door handle (2) arranged within a lower part in a rotatable manner, where the retainer device is provided in a rotating direction of the door handle. The retainer device has an opening (22), which corresponds with a guiding surface (4) of the door handle in a positive manner. Pre-stressing is produced on the retainer device by a spring unit, so that the retainer device is movable after operating the door handle. The retainer device is surrounded by a slider unit, where the spring unit influences on the slider unit.
