Abstract (en)

[origin: EP1918496A1] The connecting mount consists of a lock located between a bearing axis (15) and the bearing band (14) of the bearing (13) detachably located by the motor of the connecting mount (5) in the slip position. In the lock position and the in the rotary position of the bearing, the wing (2) is linked to the frame (1) whilst the bearing axis or the bearing band is connected to the connecting mount and firmly held to the respective opposite-lying component. The bearing axis may be excluded in the direction of the bearing band.
