Abstract (en)  
[origin: EP1918501A1] The element has inner and outer metallic panels (5, 6) respectively turned towards interior and exterior of a premise, and coupled to a chassis which is formed of two parts (7, 12) movable with respect to each other. The movable parts are coupled together by a thermal bridge rupture unit. The rupture unit has two degrees of freedom along a plane parallel to the panels, and has a plastic profile whose one end is coupled with a guiding clearance (9) in a housing realized on one of the movable parts. An additional part acts as an interface between the rupture unit and an aluminum frame.
