Abstract (en)  
[origin: EP1918791A1] The system has a spiral spring (1) comprising an inner fixing point (4) connected with a balance staff by a spiral roller (2) and an outer fixing point (14) connected with a stud (6) by a retaining element. An end region of the spiral spring adjacent to the retaining element is movably positioned in a plane perpendicular to the balance staff. The end region is pivotably movable around axis, which is parallel to the balance staff. The outer fixing point is fixed at the stud, and the retaining element is adjustably movable radial to the balance staff.
