Abstract (en)

[origin: EP1918792A1] The timepiece has a two-directional corrector mechanism provided for a display device, which displays a time related quantity e.g. date. The display device is actuated by a control lever (14), where the lever is controlled by a cam on which the control lever abuts. A correction device e.g. annular cam, is actuated by a control stem (42) in a display device correction phase. The correction device moves the control lever out of a path of the cam. The control lever normally abuts in a normal operating phase of the timepiece.
