Abstract (en)  
[origin: WO2007027036A2] A dish washer is disclosed, in which assembly of the dish washer is improved, and an error operation and trouble of a driver due to water leaked in a base can be avoided. To this end, the dish washer includes a tub provided with a space for washing the dishes and a communication hole formed on the bottom, a base fixed to the bottom of the tub, having a plane portion which is not connected with the outside, a sump assembly provided in the plane portion of the base and fixed to the tub while shielding the communication hole of the bottom, having a sump and a driver, wherein washing water is received in the sump and the driver transmits a driving force to the sump, and a leakage sensing device provided in the base, sensing a water level of washing water leaked in the base. Thus, assembly of the dish washer can be improved, and also life span of the driver can be increased.
