Abstract (en)

[origin: US2009019642A1] An antidecubital underlay pad (10) having a receiving casing with a top side of the casing and a bottom side of the casing, the casing being segmented along a plurality of segmentation axes (13) to form underlay segments (12), such that the underlay segments are provided with a molded body filling comprising a plurality of molded bodies and are bordered by segmentation lines running along the segmentation axes, wherein the segmentation lines have multiple changes in direction in their course along the segmentation axes (13) and at least the top side (16) of the casing is designed to be elastic at least in a supporting area and is prestressed by the molded body filling (20).
