Abstract (en)
[origin: WO2007016728A1] A clothes line assembly including: a support; a line carrier which is adapted to have attached thereto a plurality of lines to which clothing or other articles can be secured, the line carrier being operatively mounted to the support for movement between an in-use position in which it extends laterally from the support and a non-use position; the support including a support frame which is mountable to a wall or similar structure, the line carrier being pivotally mounted to the support frame for pivotal movement between the in-use and non-use positions; and a cover arranged so that when the line carrier is in the non-use position the cover and line carrier can adopt a stowed position in which the cover can conceal the line carrier from view, and in which the cover substantially abuts the lines and/or the line carrier, wherein the cover includes a panel operatively connected to the line carrier so that in an operative position with the line carrier in the in-use position the cover is disposed above and in spaced relation from the lines on the line carrier.
