Abstract (en)

[origin: WO2007023017A1] The invention relates to a method for evaluating the annoyance of squeaking noises within an audible signal generated during the operation of a motor vehicle or during the operation of one of its components. According to the invention, the existence of at least one squeaking noise is detected, this at least one squeaking noise is evaluated with regard to at least two predetermined characteristics, and a quantity characteristic of the annoyance of this at least one squeaking noise is determined from the at least two evaluations of this at least one squeaking noise.
