Abstract (en)
[origin: WO2007025525A2] Disclosed is a light emitting module (20) comprising at least two light sources (1) which are applied to a common support (7). At least one of the light sources (1) encompasses at least two light emitting diode chips (2). An optical member (3) of an optical element (5) is mounted downstream from each light source (1) of the module. Said optical members (3) are suitable for guiding electromagnetic radiation to a light discharging area (4) of the optical element (5). Also disclosed is an optical projection apparatus comprising such a light emitting module.
