Abstract (en)
[origin: DE102005041369B3] The method involves having a communication connection (CALL, CONF) existing between a first mechanism (EG1) of a participant and a second mechanism (EG2) of a second participant over a switching network (PBX) of a communication system. The second mechanism is stored in the context of the communication connection identifying a communication system address (RUFNO2). A PIM address for the PIM application (PIMA 1) of the first participant (I, F) is conveyed, and the conveyed PIM address (EMAIL2) is registered into a field of the electronic form of PIM application. An independent claim is included for a system for transferring a PIM address into an electronic form of a PIM application.
