Abstract (en)

[origin: DE102005041077A1] The arrangement has an electronic transformer (1) electrically connected with an output (A) of a switch (7). The switch can be controlled by a control unit (5), and a radio interference circuit (8) is coupled with the switch. The interference circuit can be separated from the switch and/or the output of the switch can be short-circuited based on a control state, which is close to the switch, for controlling the starting process of the transformer. An independent claim is also included for a method for operation control of an electronic transformer.
