Abstract (en)  
[origin: EP1921301A2] Exhaust gas recycling arrangement has a radiator (2) and a valve housing (3). The valve body (7) is a piston shifting linearly within the valve housing, by which the interior (5) of the valve housing is subdivided into an inlet chamber (6) and a discharge chamber (8). The radiator inlet (10) is attached to the inlet chamber and the radiator discharge opening (11) is attached to the discharge chamber. The inlet channel (9) opens out transverse to the stroke direction (H) into the interior of the valve body and is blocked partially from a peripheral-lateral jacket surface (13) of the valve body.
