Abstract (en)
[origin: EP1921591A1] The system (50) has a video sensor for sensing vehicle surroundings e.g. driving lane, and sensing an object found on and/or beside the lane. A locomotive set has a hauling vehicle (3) and a trailer (3.1) for transmitting an operating parameter of the trailer to the system. A line (61) or a wireless connection (62) transmits data between the hauling vehicle and the trailer. An input device inputs the operating parameter of the trailer and the hauling vehicle. An independent claim is also included for a method for controlling a driver assistance system.
