Abstract (en)  
[origin: WO2007028832A2] The invention relates to an endoprosthesis set which comprises a plug connection comprising a projection on a segment and a receiving element on another segment and a distraction instrument. According to the invention, a transversal channel, which partially overlaps the front side of the projection in a lateral manner and which joins to the receiving element, is provided, wherein the distraction instrument, having a displacement surface which acts in a frontal manner upon the projection, can be inserted on the tip thereof in such a manner that it is displaced counter to the direction of insertion when the distraction instrument is actuated. By deeper, a larger distance from the edge of the receiving element opening is produced.
