Abstract (en)
[origin: WO2007030703A2] An ostomy bag vent is disclosed. An ostomy bag vent includes a media layer exposed to the interior of an ostomy bag that is constructed to allow the flow of gases, but not liquids or solids, into the ostomy bag vent. An adsorbent layer is contained within the ostomy bag vent that is bounded by a base impermeable layer and a second impermeable layer. Gas within the ostomy bag passes through the media layer and is directed through the adsorbent layer by the base impermeable layer and second impermeable layers. Gas not adsorbed within the adsorbent layer passes through a passageway to the exterior of the ostomy bag.
