Abstract (en)
[origin: WO2006128552A1] The invention relates to methods for producing a detergent or cleaning agent dosing unit, comprising the following steps:
a) providing a detergent or cleaning agent shaped body in the form of an annular tablet having a cavity with at least two opening faces; b) sealing one opening face of the cavity with a prefabricated, filled and closed water-soluble container by linking the prefabricated sachet with the detergent or cleaning agent shaped body; c) filling the cavity with a composition that has a detergent or cleaning action. The inventive methods allow to jointly produce solid and liquid or flowable detergent or cleaning agent compositions in separate areas of a compact dosing unit.
