Abstract (en)

[origin: WO2007025509A1] The invention relates to a method for coating or decoating a component, in particular a gas turbine component, wherein in order to regionally or partially coat or decoat a component, the component is preferably completely covered with a covering medium, and wherein the covering medium is removed from only those surface regions of the component in which the coating or decoating of the component is to take place, so that a surface region of the component which is not to be coated or decoated is covered by the covering medium. According to the invention, the covering medium is removed by means of water jets.
