Abstract (en)

[origin: US2009223264A1] A locking cylinder comprises a two-part housing, comprising an upper part and a lower part. A cylinder core (20) is received in said housing and can be actuated by turning a key. The housing of the locking cylinder is fastened to the body of a vehicle (34) by fastening means (30). The aim of the invention is to reduce the space required by and simplify handling of the locking cylinder. For this purpose, the fastening means (30) used to fasten (34) the housing of the locking cylinder on the body is also used as a connecting means for fastening the housing upper part on the housing lower part.
