Abstract (en)

[origin: DE202005014093U1] The hinge (100), e.g. for doors and windows, has a component (1) to be attached to the swing panel and swing on an axis (S) around a hinge pin (11) and be locked against rotation. A bush with an external thread (15) screws into an internal thread at the swing panel component. The two parts (14,16) of the bush can rotate in relation to the coupling (17) between them, which has two sets of locking projections (24-27) for displacement in the swing axis direction.
