Abstract (en)

[origin: EP1923314A1] The device has clamps (7a, 7b) provided to circle a conveyor belt (6) on a path, where the path is identical for both the clamps. The clamps are respectively connected with a pair of traction units (13, 14). The clamps descend laterally downward before a third clamp that is behind the conveyor belt, where packages (G1, G2) are laid at the clamps (7a, 7b) that are accelerated in a short-run manner. The packages are assembled from a number of packaged products (P) such as beverages or flour packed in bags. An independent claim is also included for a method for stamping a number of packages in a foil.
