Abstract (en)
[origin: EP1923529A2] The connecting adapter (8) has a base (12) having two connecting surfaces (17, 20). The first connecting surface encloses a connecting end (18) of a first mast section (5) and the second connecting surface (20) is manufactured as an actuated connection between the base and the connecting end of the second mast section (6). The second connecting surface (20) is provided for tight fit between the base and the connecting end of the second mast section is actuated with the connecting end of the base. The base is in the form of a hollow cylinder with a continuous diameter (25, 33). An independent claim is included for a mast.
