Abstract (en)

[origin: EP1923559A1] A method controls the displacement of a stack of a piezoelectric actuator for use in a fuel injector in order to control fuel volume delivery. The method comprises causing a varying current to be driven into or out of the stack to charge or discharge the stack, respectively, during an opening phase. The opening phase comprises at least a primary phase, measuring a parameter during the opening phase. The method further comprises comparing the measured parameter with a predetermined threshold value, and taking corrective action to adjust the fuel volume delivery, during a subsequent injection, depending on the result of the comparison.
