Abstract (en)  
[origin: WO2007025923A1] The invention relates to a vacuum cleaner nozzle (10) having a tubular support (12) whose first end region (14) can be plug-connected to an end of a suction pipe of a vacuum cleaner, wherein a second end region (16) of the support, which end region faces away from the end of the suction pipe when the first end region and the end of the suction pipe are in the plug-connected state, has a form which is matched to a cleaning task of the second end region. In order to reduce the space required by vacuum cleaner accessories and at the same time to provide better handling of the vacuum cleaner overall, it is provided that the second end region (16) can likewise be plug-connected to the end of the suction pipe, and that the first end region (14) likewise has a form which is matched to a cleaning task of the first end region.
