Abstract (en)

[origin: WO2007006466A1] This description relates to a device for the treatment of glaucoma composed of: an aspiration cannula (19) adapted to penetrate the anterior chamber (13) of the eye to aspirate the trabecular meshwork (16) and an infusion cannula (18), associated with said aspiration cannula (19), to infuse a sterile poly-saline solution in the anterior chamber (13) of the eye, in order to maintain the original open spaces and to compensate the aspiration action on the trabecular meshwork (16).
