Abstract (en)

[origin: WO2007031158A1] A laboratory temperature control device (1), with a top face (2) which can be brought to specific temperatures and has depressions (7) adapted to vessels of a first type, is characterized in that an adapter (14, 44, 64) is provided which is designed to conduct heat at least perpendicular to the plane of the top face (2) of the laboratory temperature control device (1) and whose underside is adapted to make planar surface contact with the top face (2) of the laboratory temperature control device (1), while its upper face is designed for planar surface contact with vessels (9, 49) of a second type.
