Abstract (en)

[origin: WO2007030954A1] The invention relates to a method for production of a material web in particular a ribbon with a velvet edge (6), wherein a material web (4) is separated by cutting the weft threads (18) with a cutting tool (16) along the warp threads (20, 20a, 20b) and extracting and removing the warp threads (20e) adjacent to the cutting edge. According to the invention, the velvet edge (6) and the device for production thereof may be improved, by arranging a deflector body (22, 24) after the cutting tool (16) to at least one side in the material web (4a, 4b) at a separation from the warp threads (20a) for extraction in order to separate the warp threads (20a) for extraction from the remaining warp threads (20, 20b).
