Abstract (en)
[origin: WO2007031073A2] The invention relates to a support housing (27), comprising a housing part (27a, 27b) for an active component (35, 36) of a door stay, the housing part (27a, 27b) having at a first end (24) an opening (48) for receiving the active component (35, 36). The problem of developing a support housing which can be produced on an industrial scale easily and flexibly in line with changing requirements is solved by the invention in that the housing part (27a, 27b) comprises a cut-off extruded profile (1). The invention also relates to a door stay comprising a stay bar (26) with a first side (34), a first active component (35), which co-operates with the first side (34) of the stay bar (26), and a support housing (27) with a first housing part (27a), the first end (24) of which is open, and with an opening (48) for the first active component (35), the first housing part (27a) comprising a cut-off extruded profile (1).
