Abstract (en)

[origin: WO2007031681A1] The invention concerns a starter switch (10) comprising a winding borne by a support (24) of the type wherein the winding is electrically connected with the outside of the switch via connection means which include a connecting element borne by a cover and a second element (65, 66) arranged inside the switch which is connected to at least one winding wire (22), the second connector element (65, 66) being connected to at least one conductor wire of the winding by the so-called insulation-displacement connecting technique.
